NUTRITION TIP OF THE WEEK FROM THE KSC FITNESS CENTERS: Do you know what causes food allergies? Reactions occur when the immune system overreacts to certain proteins in food. There are many food ingredients that can provoke an allergic reaction, but the vast majority of reactions are caused by the "big eight" offenders that cause more than 90% of all food allergic reactions. They are tree nuts (like walnuts and almonds); peanuts (they're legumes, not nuts); milk; eggs; fish; shellfish; soybeans; and wheat. (If you notice, most of these foods would appear on a list of foods good for you as a dieter.) Typical symptoms include nausea, skin rash, nasal congestion, hives, and wheezing. Fortunately, most children outgrow their food allergies, but some allergies—particularly to peanuts, nuts, and seafood—rarely disappear. These allergies require lifelong vigilance. And unfortunately, you can develop new allergies at any time. (TA-C2)

FLAGS AT HALF STAFF: The flags of the United States flew at half staff on the Kennedy Space Center on August 16 and 17, in compliance with the provisions of the United States Code, Title 36, Chapter 10, Section 175, and in honor of US Congressman Floyd Spence, who died on August 16. (TA-E2)
